

Tdap Vaccine in Pregnancy: Benefits & What to Expect

9 out of 10 babies (90%)

are **protected** against pertussis for the first 2 to 3 months of life if their parent received the Tdap vaccine during pregnancy.^{1,2}

Getting the Tdap vaccine in pregnancy lowers your baby's chance of:

Serious illness³

Hospitalization³

ICU admission³

The Tdap vaccine does **NOT** increase the risk of complications like miscarriage, stillbirth, or preterm birth.⁴

Common side effects of the Tdap vaccine in pregnancy:

About **7 in 100 people** experience redness or soreness near the injection site.⁵

About **3 in 100 people** experience a headache.⁵

About **2 in 100 people** experience a fever of 38.5 C or less.⁵

About **1 in 100 people** experience a reaction serious enough to visit a doctor or hospital.⁵
